

Primjer s dinamičkim  
upravljanjem spremnikom

## Radni spremnik

## Pomočni spremnik

## Radni spremnik

## Primjer mogućeg stanja

zeleno – aktivni proces/dretva

plavo – pripravnici proces u spremniku

žuto – pripravnici proces na disku

narančasto – blokirani proces na disku

Radni spremnik

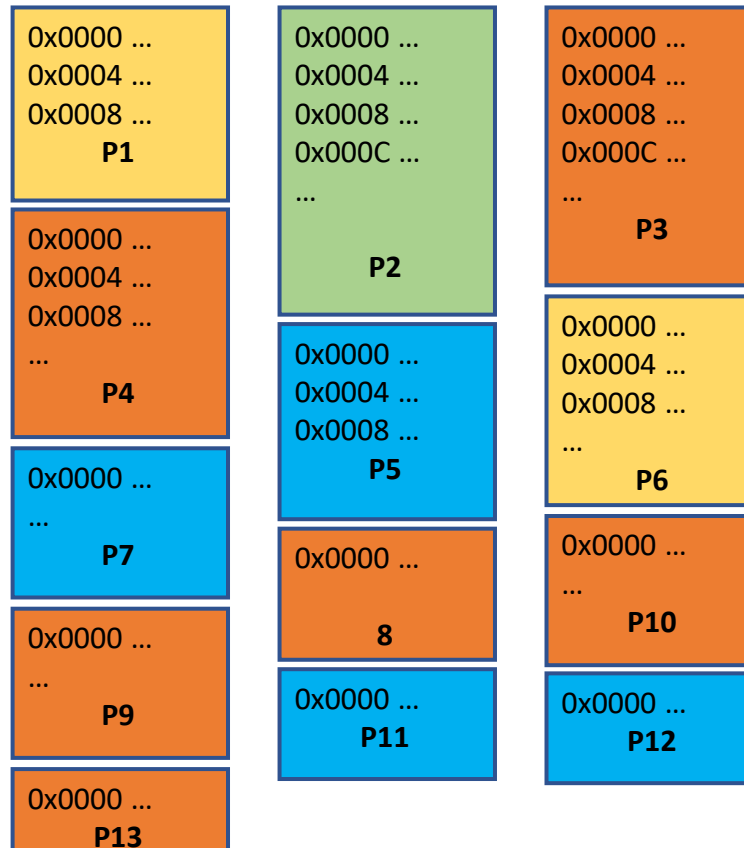

**Neka OS treba napraviti:**

**P2 se blokira, stavi ga na disk**

**učitaj P1**

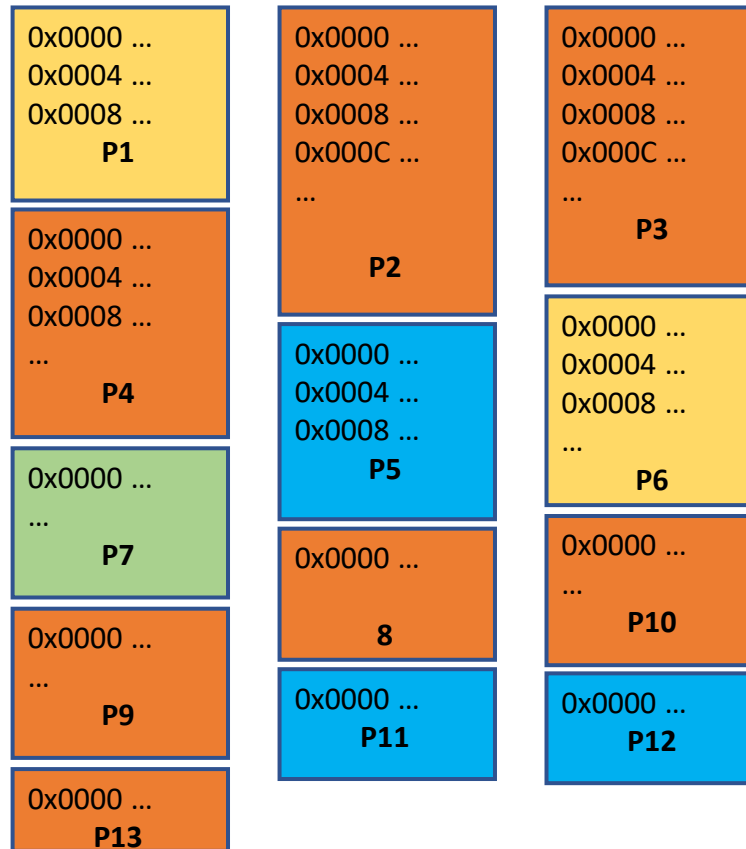

**za to vrijeme aktivna => P7**

Radni spremnik

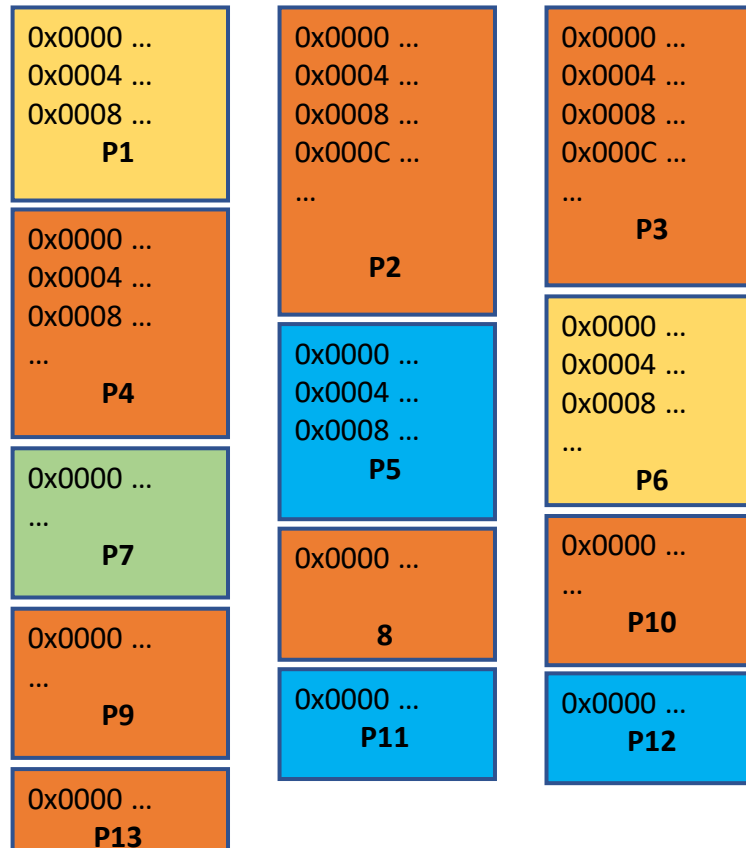

1. Pokreni spremanje P2 na disk (DMA)
2. Zamjeni kontekst – aktivna P7

Radni spremnik

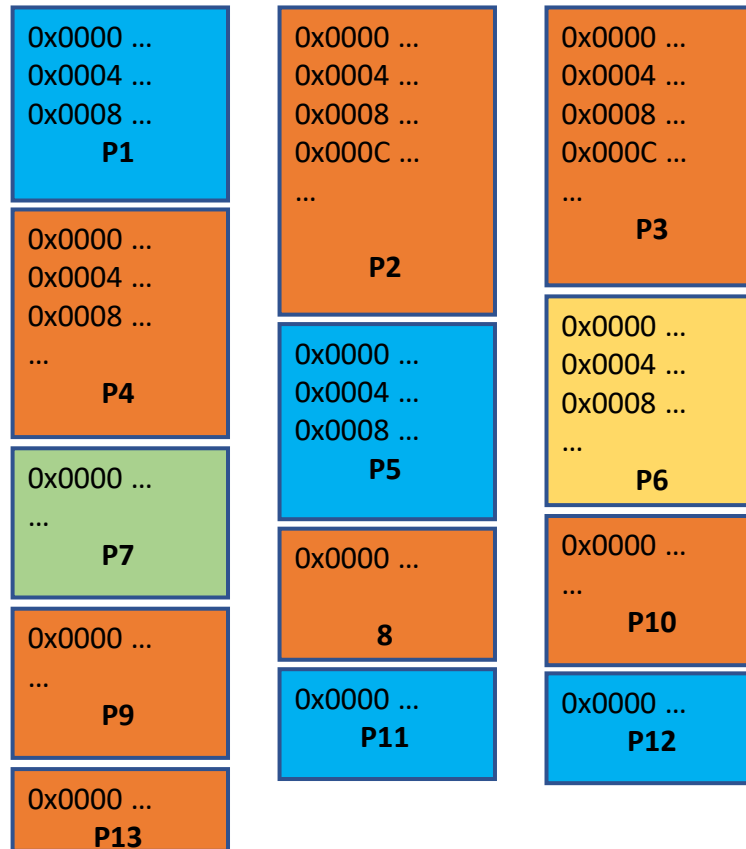

**Kada DMA obavi kopiranje P2 na disk:  
1. Pokreni učitavanje P1 s diska (DMA)  
(aktivna je i dalje P7)**

Radni spremnik

**Kada DMA obavi kopiranje P1 u memoriju  
on postaje pripravan**  
Vidi se nastajanje fragmentacije

Radni spremnik

**Neka P7 sada završi – oslobađa se dio koji je on koristio**

Radni spremnik

Zbog fragmentacije P6 ne stane u niti jednu rupu, a stalo bi kada bi one bile spojene
